

# INSTALLATION INSTRUCTIONS --- Cross Braces

## RFBRACES

The CROSS BRACES option for your new Rack are engineered to provide added structural strength & integrity to your Rack structure.

NOTE that the four CROSS BRACES included in the box have a slightly different appearance at both ends. One end is blunt while the opposite end has a sharper point. (see Fig. 1)

Fig. 1

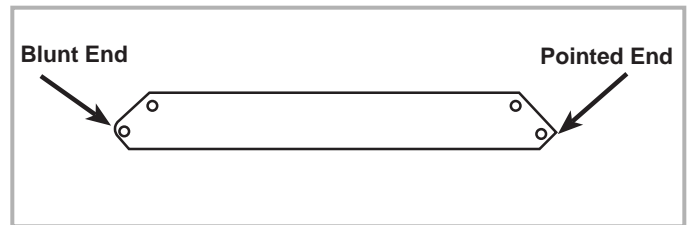

Fig. 2

When installing your CROSS BRACES, make sure the sharper pointed end of each brace is screw fastened to the upper or lower rack rails that extend from the front of your Rack to the rear (depth rails). (See detail 1 in Fig. 2)

The blunt end of each CROSS BRACE screw fastens to the rack rails running from top to bottom (height rails) of your Rack. (See detail 2 in Fig. 2)
